

Building an AI-Ready Workplace

People, Practice & Possibility

Jennifer Hopp, SPHR, SHRM-CP, CDE

Director, Human Resources

Our Org

98 FTEs

Located in Raleigh, NC

Average tenure is 7 years

Average age is 43 yrs old

5 generations represented

AI is a support tool—not a replacement for human judgment, expertise, or accountability.

Our Why

Establish a shared foundation

Move from individual experimentation to shared capability

Improve efficiency, communication, and innovation

Reduce risk and exposure

Reinforce responsible use

Our Baseline

Our March 2026 baseline survey established where staff were starting.

79%

use AI at work*

40%

use AI often or always

64%

believe AI will positively
impact their work

The data showed adoption was already underway—but confidence, prompting skills, use-case awareness, and governance questions were uneven.

**In a 2024 poll, only 25% of staff were using AI at work*

Our Foundation

- Program kick-off including history of AI
- Creation of internal AI Champion network
- AI Usage policy (*in revisions*)
- AI Governance (*in progress*)
- Required two foundational courses in Sidecar, with options for more e-learning
 - Core learning areas: AI Prompting and Managing Time with Copilot

Our Competition

- Held AI Showcase for staff
- Open to individuals or teams after completing the required foundation courses.
- Focus areas: administrative efficiency; communication quality; process improvement; documentation and knowledge sharing.
- Staff were challenged to identify practical, mission-supportive applications while demonstrating responsible use.
- Winners determined by live community rating via a scoring rubric
- Top two scores awarded cash prize

5
staff
presentations

5
departments
represented

Our Demonstration

Optimizing the ABA Policy Book (Credentialing)

- ✓ Copilot used to locate exact policy language and refine physician communications improving accuracy, consistency, and professionalism.

From Manual Scoring to One-Click OSCE Scoring (Psychometrics)

- ✓ Automated a 20+ step manual OSCE scoring workflow into a single reusable, one-click process while keeping all psychometric judgment, QA, and pass/fail decisions under human control.

Support Intelligence Hub (Marketing & Communications)

- ✓ AI-assisted support tool that turns a single customer issue into a drafted response, troubleshooting steps, issue classification, and next actions — converting repeat work into reusable, shareable knowledge.

Making the Hard Stuff Simple (IT/QA)

- ✓ Real use cases showing AI lowering barriers across skill levels via staged prompting, merging complex SQL, database diagramming, and test-case compression

Translating Institutional Knowledge (Governance)

- ✓ AI helped transform 20+ years of expertise into ABA's first 14-module Board of Directors Orientation Curriculum

Our Results

12

AI
Champions

5

AI Showcase
presenters

100%

Staff completion of
foundational courses

- Sidecar statistics on foundational course completion & site login
- AI Showcase & AI Champions participation
- Copilot usage from start of program to EOY
- Staff survey at end of year to measure against initial baseline survey

Impact trend for the past 6 months

Our Challenges

- Staff fatigue around AI tech-speak
- Uncertainty of how AI may negatively impact staff roles (reduction or elimination)
- Sidecar training was not viewed as relevant
- Variable comfort using AI or understanding AI concepts
- Inconsistent policy enforcement on approved AI tool (ex. Copilot vs Claude)
- Concern over leaning too far into AI to quickly
- Making AI approachable

Our Insights

1

Meet staff where they are; varying comfort and trust levels

2

Messaging is key; how does AI literacy impact staff and their roles

3

Create learning from bottom up; basic to more advanced use

4

AI is for everyone in every role, not just IT

Make governance practical: clear guardrails increase confidence and trust

5

Make it fun. Give employees a stage to spread ideas.

6

AI literacy is a marathon, not a sprint

7

A Practical Model for Member Boards

1. Define your baseline of your organization's AI literacy

2. Build a common foundation through shared learning

3. Set clear guardrails with governance, policy, or best practices

4. Challenge staff to solve real problems and share them with peers

5. Showcase and recognize what works at all levels of the organization

6. Determine measures of success and build over time. Practice makes progress.

The objective is not AI adoption for its own sake. It is responsible capability that strengthens mission, efficiency, quality, and trust.

ABMS Member Board Connect

AI LITERACY AT THE BOARD LEVEL

Chelsey Williams, MBA

American Board of Allergy & Immunology

September 15, 2026

cwilliams@abai.org

DISCLOSURES

N/A

WHY AI MATTERS TO SMALL BOARDS?

- Automates routine administrative processes
- Enables employees to summarize information efficiently
- Enhances organizational communication
- Strengthens data analysis and reporting capabilities
- Enables staff to prioritize creative, strategic, and human-centered responsibilities

ESTABLISHING AI POLICIES

- Internal policies should define approved tools
- Prohibited uses
- Review process
- Data protection requirements
- Procedures for reporting issues

WHERE TO START?

Drafting announcements

Creating meeting agendas

Summarizing non-confidential
documents

HOW STAFF ROLES MAY CHANGE

BUILDING AWARENESS

AI Basics Beginner Tutorial: ChatGPT, Claude, and More:
<https://www.youtube.com/watch?v=cocGYL7mRYk&vl=en-US>

AI Basics for beginners:
<https://www.youtube.com/watch?v=VGfpV3Qj4as>

AI Mastery Full Course:
<https://www.youtube.com/watch?v=BTTS8jKStWc>

SUGGESTED IMPLEMENTATION ROADMAP

- Establish policies and select approved AI tools
- Run limited pilot projects with human review
- Evaluate results, risks, and staff feedback
- Identify repetitive tasks and common challenges
- Expand successful uses across your organization

HOW HAS AI IMPACTED THE ABAl?

Current Projects

- Crafting Emails
- Assisting with mtg. minutes
- Creating mtg. agendas
- Assisting with blogs

Findings

- Minimal challenges
- Reduction of time spent working (range from 15-35 minutes)
- Will explore how AI can assist with more complex projects

TAKE-AWAY QUESTIONS

- Which tasks in our organization could benefit most from AI?
- What information must never be entered into an AI tool?
- What training would staff need first?
- Has AI been a success or an hinderance?

Ethical AI in Medical Specialty Board Testing

A practical guide for ABMS member board professionals

Brooke Houck, PhD

The American Board of Radiology

Associate Director of Assessment Research and Strategy

AI Is Already in Your Building

It Arrived With Your Vendors

The platforms your board already licenses are shipping AI features, often switched on by default. Most boards were never asked to approve them and cannot say today which ones are running.

It Is Already on Staff Desktops

Your people are using general-purpose assistants to draft, summarize, and analyze. That happens with or without a policy, and right now it is mostly without one.

The Question Has Shifted

It is no longer whether AI affects your work. The question is whether you are steering it ethically.

Why ABMS Boards Are at the Frontier

Live Challenges Right Now

Diplomates, staff, and vendors are all asking what your board permits. Most boards are answering case by case, with no written policy behind the answer.

Generational Stakes

The decisions you make today about AI shape the validity of physician certification (and the patient safety it protects) for the next generation.

What “Ethical AI” Means in Your Job

Ethical AI comes down to three tests you apply before AI touches any work.

- Is this **fair** to every candidate?
- Can we **explain in plain words** how we got the result?
- Do we know **who signs off** when it is wrong?

The Other Direction: Candidates Using AI

Exam Preparation

Candidates are already using general-purpose assistants to study, generate practice items, and summarize source material. Most of that is legitimate, and none of it is something you can detect or forbid.

Consistency of Answer

When candidates ask what is allowed, they should hear the same answer from every person who replies. Publish it once, in plain words, and point everyone to it.

Detection Tools

AI-detection scoring is unreliable, and it falls hardest on non-native English speakers. If you use it, it informs a human decision. It never decides on its own.

When You Get Back From This Conference: Four Moves

01

Inventory

List every AI tool in use or under evaluation: in vendor platforms, on staff desktops, and in anything candidate-facing. If you cannot name them all, that is your first finding.

03

Establish a Review Cadence

Schedule quarterly check-ins on accuracy, bias metrics, and incidents now, so procurement is not the only time anyone looks.

02

Assign Ownership

Each tool needs one named person accountable for how it performs and how it is used. Put the name in writing.

04

Create an AI Use Policy

Define what staff, vendors, and candidates may, and may not, do with AI in your board's work. Two pages is enough to start.

Where to Look for the Tools You Have

Vendor Platforms

Ask each vendor which AI features are enabled on your account today, which are optional, and what data leaves your environment. Ask in writing. “None” is an answer worth having on file.

Staff Workflows

Ask your teams what they already use for drafting, research, and analysis. Treat unsanctioned use as an unmanaged tool, not misconduct; it fades once an approved option exists.

Anything Candidate-Facing

Help content, chatbots, and status messaging carry *your board's name* whether you built them or not. Decide what they may say and publish it.

Run the Bias Audit You Already Know How to Run

You already disaggregate outcomes to detect bias across race, gender, and training background. AI trained on non-representative data carries those same disparities into anything it touches along a candidate's path.

The data to run this check already sits in your psychometrics shop. **What is usually missing is anyone asking for the AI cut of it.** Ask for it before the next exam cycle.

In your first week back: Ask for the disaggregation you already produce to be run on the AI-assisted steps too, and mention it to whoever talks to our vendors.

BEFORE WE SAY YES

Before We Say Yes: The Three Tests

The same three tests, asked when we are choosing a tool.
Make sure the answers are written down.

In your first week back: Send these three questions to whoever talks to our vendors next.

1 Fairness

What data, and which fairness checks were done?

2 Explainability

How does it reach a decision, in plain words?

3 Traceability

What can fail, and who reviews the output?

Human Review That Actually Reviews

If a tool scores a candidate and no one can say why, that is a **black box**.

An answer comes out, but the reasoning stays hidden.

Your board still owns that decision; the tool holds no responsibility.

What To Do

- Ask for a reason in plain words with every result.
- Put one named person in charge of each tool.
- Spell out the review: what the reviewer sees, how much time they get, and what happens when they disagree.

A rubber stamp is not oversight.

In your first week back: Write one page per tool: what it decides, what data it uses, who reviews the output, and who is accountable by name.

WHEN SOMETHING LOOKS OFF

What to Watch For

It Changes Quietly

Vendors update models without telling you, and behavior changes underneath. Re-check outputs against a fixed set of examples every quarter, whether or not anything looks wrong.

Actual Use

Watch how staff actually use the tools and what they paste into them. With unmanaged use the first question is simple: what board data is leaving the building?

Vendor Reporting

Ask for quarterly reporting on those same measures, with a named escalation path. If a vendor cannot produce the report, treat that as a finding in itself.

In your first week back: Put the first quarterly re-check on the calendar and name who receives the reports.

The 90-Day Checklist

Six things that should be true one quarter from now. Every one is one of the three tests with a date on it.

☐ AI inventory complete with named owners

☐ Vendor bias and fairness documentation on file

☐ Human review required before any AI output affects certification status

☐ Staff trained on AI limitations and appropriate use

☐ Candidate-facing AI use policy published and enforced

☐ Monitoring cadence established with defined escalation path

The Standard Has Not Changed: The Tools Have

Your mission remains: **valid, fair, reliable assessment of physician competence for patient safety.**

Ethical AI protects that mission as the tools evolve around you.

Start Monday: Pick one AI tool, ask the three tests, document the answers.
